[Home](#) > How to raise a child to be genius from birth

«Комсомольская правда», 24 September 2015

The Kazakh wisdom says: «Болар бала жасынан» which means that if a person is destined to achieve success, it will happen not sometime in future but will be visible early in his childhood.

Learning biography of the greatest names of history ever leads to a conclusion - indeed, people are born to be genius. However, a miniscule share of congenital genius people realize their potential. As researchers say genes are responsible for brilliance while - environment and upbringing - for its realization.

Fathers of "the Kings of Music" Mozart and Michael Jackson were encouraged that their sons were extraordinarily talented. So that by age 5 - 6 their sons had tours playing the lead role. Getting to know the world of numbers belonged to the greatest mathematicians Sofia Kovalevskaya and Karl Friedrich Gauss is known to have happened surprisingly early. If Kovalevskaya's talent was a family disposition, Gauss's - a consequence of labour inclusion.

Long year studies of the mid XX and early XXI centuries on the early child development more precisely described the fateful influence of childhood. The Harvard center of developing childhood distinguishes five undeniable facts about the interrelation between happy childhood and successful adulthood. This interrelation is explained by critically high sensibility of children within the first five years of their life. Thus, the first difference in the vocabulary is observed in 18 months, and by age 3 75-80% of child's brain is already formed. Feeling lack of parents' care or suffering ill treatment until 3 a child is highly destined for underdevelopment and poor health. That's why experience of developed countries demonstrates financing of the programmes on mothers support and preschool education.

It's no coincidence that one of the Sony corporation co founders Masaru Ibuka in his book titled "After three it's too late" says: "...mental development of a child from his birth to 3 years is similar to development of a 4-17 - year old child. Even if it is possible to catch up with underdevelopment assumed in this age, still it will require extremely big efforts, means and pressure oriented to a little child.

It is important to remember whether your child belongs to the number of congenial genius people or not, nature empowers him with a lot of possibilities. The key is to be beside, recognize and cultivate his abilities. The Japanese, for example, truly believe that it is possible to precisely identify inclination to future profession when a child is 5 year old.

Along with home care organized education in development centres and preschool

educational organizations is getting more important.

- In developed countries non-obligatory preschool education receded into the past, - said Eldos Nurlanov, Director of Preschool Care and Education Development Department of Information-Analytic Center JSC. - According to UNESCO standards it is advisable that children from 0 to 2 years and from 3 to 6 years have at least 2 hours per day and 100 days per year in isolation from the family environment. According to the statistics as at the start of 2015 in our country 3-6 year old children (78,6%) are highly covered with the preschool education while 1-3 year old children (16,4%, in the US - 33%) are not.

As Eldos Nurlanov says importance of preschool education is proved by the following numbers: 15- year old Kazakhstan school children pass a test and get at average 32 points more if they attended nurseries.

- The results of our survey held in 2014 show that among 24-- 40 year-old 4 995 Kazakhstan people attended nurseries it is 23% greater than those who have higher education and it is 7% less of unemployed people - says Mr.Nurlanov.

To sum up, importance of care and education in the first years is not less than and thought to be higher than school or any education. At that simple care without development appears to be not enough and even detrimental for consequent education, behaviour and health. And it is not just to emphasize the importance of the preschool care and education but the truth of the modern life. The earlier and more we start to pay attention to potential of our children, the more chances they have to achieve success and to avoid rigours of life.
